

Individual reflection

The first week we have created a team consisting of four students from Software Engineering and three students from Industrial Engineering and Management. Together we have created a social contract that consists of rules and agreements. We have also decided on three key performance indices and worked on what our initial project scope will be. Regarding the work we performed this week I have helped the group navigating towards our social contract and our project scope.

My focus for next will be to become better at understanding Scrum and how it can be implemented in our project. I also hope we can decide what type of programming language or software that we are going to use for the project.

I think that I can contribute with my structuring and planning skills to achieve new goals. I will also make sure that the workload for the project will be fairly evenly distributed. One thing that I can help my team with is to be supportive in stressful and troublesome situations. With previously obtained knowledge within the business model canvas I hope that I can help the team to learn more about that model.

Regarding Scrum we have not yet started to work with it, but it is something that we hope can dig into more next week.
